

BOOSTerina

DermoCosmetic Line

with **PDRN**

BOOSTerina *DermoCosmetic Line*

Skin aging is an inevitable process and, as we age, the **loss of moisture, volume** and **elasticity** leads to gradual deterioration of the epidermis. The ability to heal or regenerate slows down, fine lines, wrinkles and pores become more evident; as a result the face may appear opaque, dry, with thinner skin denoting greater fragility.

For this reason, **preventive anti-aging treatment** is recommended and, with current advanced technologies, delaying the aging process is no longer impossible.

PDRN

A NEW XCELENS INTERNATIONAL LINE

The current range of Xcelens International home skincare products makes use of new natural products perfected in the laboratory through advanced biotechnologies; the **BOOSTERINA® LINE** is a solution aimed at ensuring healthy, bright and youthful skin.

PDRN (polydeoxyribonucleotide), is a form of marine-origin **DNA** (salmon sperm), whose molecular size allows for greater effectiveness owing to its penetrability and can reactivate the repair process within the skin.

Hyaluronic acid has a hydrating, lifting and replenishing action.

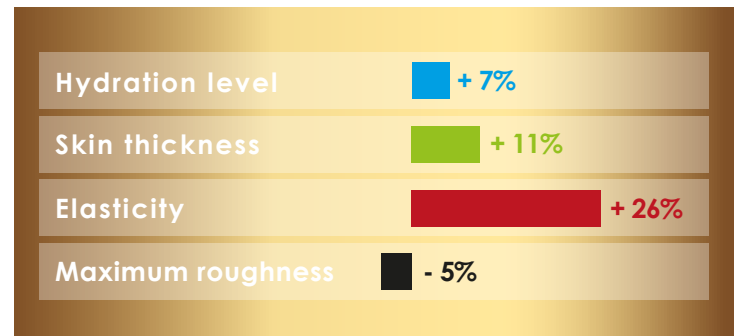

BOOSTerina® PDRN filler serum and **BOOSTerina® PDRN Anti-aging & Hydrating Cream** skincare products are both used to counteract the visible signs of skin aging such as fine lines and wrinkles, to protect the skin from external agents and to heal sun damage.

APPROVED EFFICACY OF PDRN (POLYDEOXYRIBONUCLEOTIDE)

PDRN is a fundamental ingredient not normally synthesised by our body; by including this essential component in your skincare routine, you optimise the health of the epidermis and ensure the best defence against accelerated aging caused by environmental conditions and lifestyle.

PDRN is a macromolecule consisting of **polydeoxyribonucleotides** joined together by a phosphodiester bond, with an **average molecular weight of 350,000 daltons** it is structurally similar to a mixture of **DNA fragments**. Long used in dermatology in injection treatment for tissue regeneration, its first functional applications date back to 1986, when it was used to deal with illnesses caused by the Chernobyl disaster.

PDRN is **able to accelerate the natural healing process of wounds** in the body and represents the latest cutting-edge anti-aging and skin regeneration treatment and is considered a reliable active ingredient by skincare experts around the world.

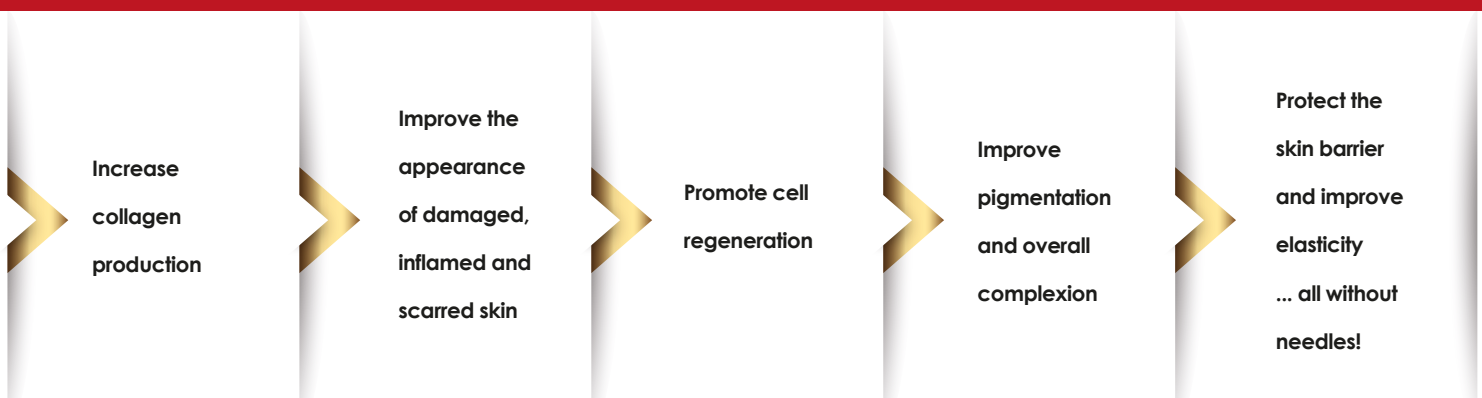

A **biotechnological process** enables the extraction from the gonads of the male sturgeon of **Deoxyribonucleic Acid Sodium Salt**. The process involves extracting and **purifying the DNA** and its **complexation with sodium**.

The INCI cosmetic ingredient name is **Sodium DNA** and it is effective for:

With sufficiently small molecules for administration under the epidermis without injection, PDRN has a clinically proven capacity to:

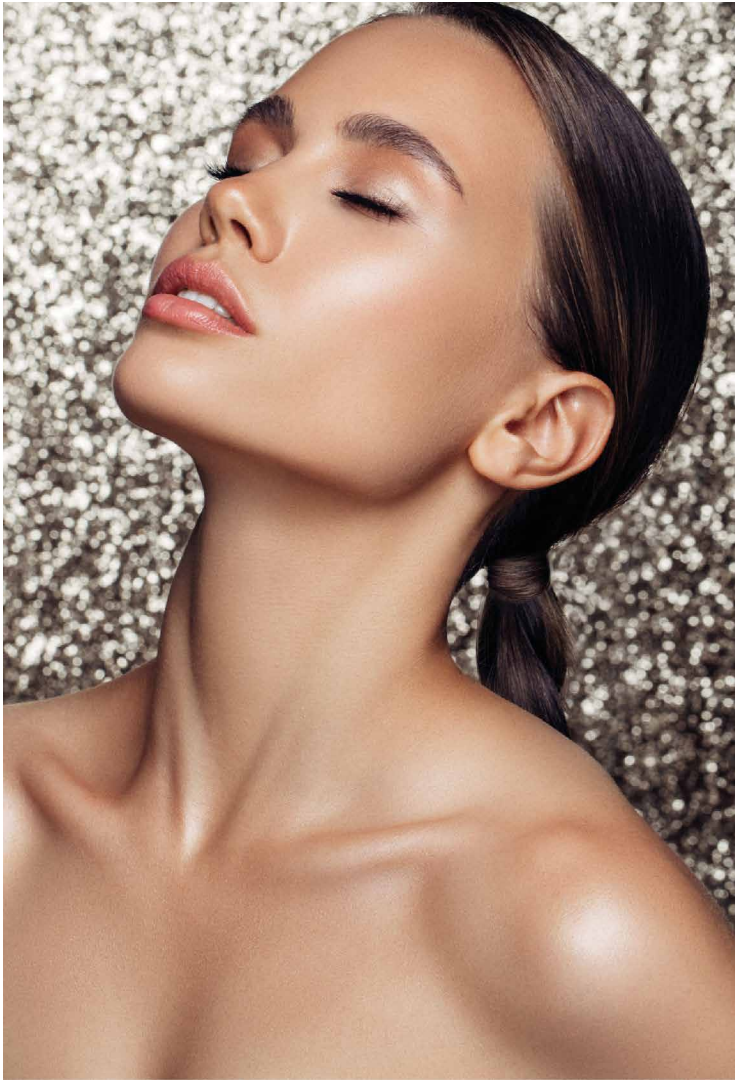

Innovative ingredients

HYALURONIC ACID TO "REHYDRATE" THE SKIN

This powerful **hydrating ingredient** is naturally found in connective tissue but decreases with age, so including it to your skincare routine is essential.

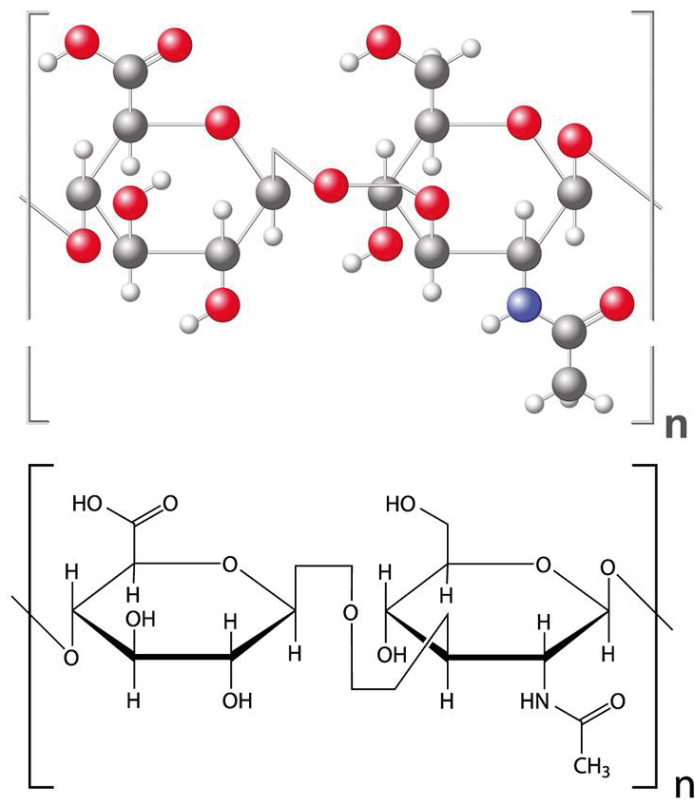

Hyaluronic Acid is a humectant that attracts water and binds it to the skin cells, providing deep, long-lasting and intense hydration.

The combination of **hyaluronic acid with PDRN**, when used in skincare products, doubles the potential for hydration by helping to maintain optimal levels, improves the protective lipid barrier, and increases the resilience of the skin: the tone is visibly firmer straight away, the texture is smoother to the touch and lines and wrinkles appear less visible.

BOOSTERina

PDRN FILLER SERUM

Boosterina® PDRN Filler Serum is an innovative serum with a light texture and rapid absorption rate, distinguished by a pleasant skin feel

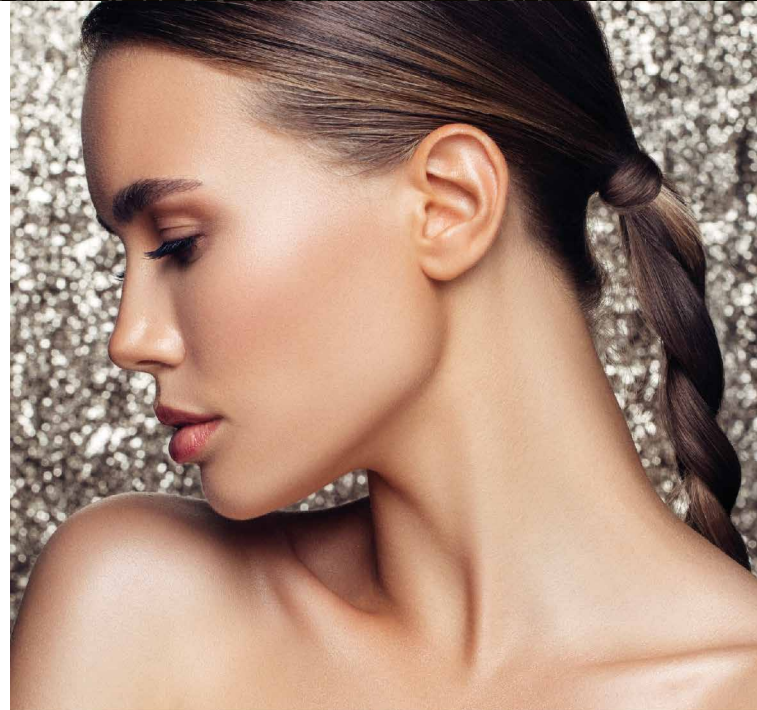

Each box contains: 1 glass bottle of 30 ml e fl 1,01 oz.

HOW TO USE

Apply a small amount of the product onto clean and washed face, neck and neckline skin. Gently massage until completely absorbed. Reapply as needed.

This serum can be used as an independent skincare product at least once a day depending on skin type and the season or applied prior to **Boosterina® PDRN Anti-aging & Hydrating Cream** to boost its effect and performance.

INGREDIENTS:

Aqua, Propanediol, Ammonium Acryloyldimethyltaurate/Vp Copolymer, Sodium Hyaluronate, Glycogen, Sodium Dna, 1,2-Hexanediol, Phenoxyethanol, Caprylhydroxamic Acid.

Based on **PDRN (Sodium DNA)**, **Hyaluronic Acid** and **Glycogen**, it improves skin hydration and elasticity, while promoting collagen production.

It helps reduce scars by repairing damaged skin, as well as decreasing fine lines and wrinkles on the face, neck and neckline.

Highly effective for skin rejuvenation, it visibly improves tone and reduces the appearance of age spots, providing a more toned, firm and replenished complexion to the entire face.

BOOSTerina

PDRN ANTI-AGING & HYDRATING CREAM

Boosterina® PDRN Anti-aging & Hydrating Cream is a sumptuous cream with intensive anti-aging and hydrating action

Each box contains: 1 jar of 50 ml e fl 1,66 oz.

INGREDIENTS:

Aqua, Caprylic/capric Triglyceride, Cetearyl Ethylhexanoate, Diisostearoyl Polyglyceryl-3 Dimer Dilinoleate, Isononyl Isononanoate, Cyclopentasiloxane, Octyldodecanol, Glycerin, Butyrospermum Parkii Butter, Sodium Hyaluronate, Magnesium Sulfate, Cera Alba, Hydrogenated Castor Oil, Glycogen, Sodium DNA, Ammonium Acryloyldimethyltaurate/vp Copolymer, Phenoxyethanol, Cyclohexasiloxane, Imidazolidinyl Urea, Parfum.

HOW TO USE

Apply a small amount of the product onto clean and washed face, neck and neckline skin. Gently massage until completely absorbed. Reapply as needed.

The cream can be used as an independent skincare product at least once a day depending on skin type and the season or applied in layering after the *Boosterina® Filler serum*, to boost its effect and performance.

The formula contains all the regenerative powers of **PDRN (Sodium DNA)** and **Hyaluronic Acid**, together with other moisturising, soothing and nourishing active ingredients that promote and help maintain skin hydration (especially for dry, sensitive and mature skin) to provide protection and accelerate cell recovery, such as:

Glycerin - a highly hygroscopic substance, obtained as a by-product of the saponification of fats.

Shea butter - soothing, elasticising and restorative, with a very high content of unsaponifiable substances essential in the formation of collagen and elastin.

Glycogen - a glucose polysaccharide sugar naturally present in the body, including the skin. Glycogen's water-absorbing properties help maintain the ceramides that strengthen the skin barrier and provide an antioxidant defence against a variety of air-borne particulate pollutants that prematurely age the skin.

Beeswax - with protective and moisturising properties, forms a soft protective film on the epidermis without clogging the pores.

The cream can therefore **protect the skin from the elements**, soothe cracks and small irritations, restore tone and firmness, counter volume loss and improve sagging and roughness, providing a smoother appearance and more uniform tone while promoting healthy cell turnover for a younger, more radiant complexion.

Top texture for flawless skin quality

The combined use of **Boosterina® serum and cream** boosts results and helps:

▶ Improve hydration, elasticity and skin thickness

▶ Slow aging and thickening of the skin barrier for a stronger defence against the environmental and non-environmental causes of premature aging

▶ Revitalise the skin by promoting cell growth and encouraging fibroblast production

▶ Increase collagen production and healing for damaged skin

▶ Reduce fine lines and wrinkles over the entire face, neck and neckline

Depending on response and skin type, for an enhanced, combined and balanced action we recommend first using the serum and then also the cream once the serum is absorbed.
